

Water Re-use Statement

Statement on Recycled and Reused Water

Cleangrad d.o.o.

2025

1. Purpose

The purpose of this document is to provide a formal declaration regarding the use of recycled and reused water within Cleangrad d.o.o.'s operations for the 2025 reporting period. This statement supports our environmental reporting obligations and our participation in the EcoVadis sustainability assessment.

2. Operational Background

Cleangrad d.o.o. is a provider of engineering, production, installation, and servicing of cleanroom systems. Our operations do not include industrial manufacturing processes requiring process water or water-intensive production activities.

Water consumption within our facilities is limited exclusively to domestic and sanitary purposes, specifically:

- Sanitary facilities (restrooms),
- Office and staff welfare use,
- General cleaning and maintenance of premises.

3. Declaration on Recycled and Reused Water

Cleangrad d.o.o. does not currently operate any systems for water recycling, water reuse, rainwater harvesting or greywater recovery at any of its operational sites.

Furthermore, the company's activities do not generate process wastewater streams suitable for internal recycling or reuse (e.g. industrial effluent, cooling tower blowdown or wash-water).

Total volume of recycled and reused water for the period 2025:

0 m³ (zero cubic meters)

4. Measurement and Monitoring

Although the volume of reused water is zero, Cleangrad d.o.o. monitors its **total water withdrawal** from the municipal supply to ensure efficient resource management. Water consumption is tracked via utility bills and internal facility checks. This data is reviewed annually to detect anomalies and prevent leakage.

Water consumption data are retained as part of the company's environmental records.

5. Reporting Value

Indicator	2025
Total recycled water	0 m ³
Total reused water	0 m ³

6. Commitment to Resource Efficiency

While water reuse is currently **not applicable (N/A)** to our operational activities, Cleangrad d.o.o. maintains a policy of continuous environmental improvement.

- We will periodically review the feasibility of water efficiency measures.
- Should our operations expand to include activities that generate reusable water, we will assess the viability of implementing recycling technologies in line with local regulations and environmental standards.

7. Conclusion

For the 2025 reporting period, Cleangrad d.o.o. confirms that the total volume of recycled and reused water was 0 m³. Due to the nature of the company's operations, no processes exist that would generate or utilise recycled or reused water. Consequently, this indicator is currently reported as Not Applicable (N/A), while the company continues to monitor opportunities for improving overall water efficiency.
